## Index

| Sr. No. | Experiment                                                                                                                                                                                                                             | Page No. |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1       | Install C compiler (GCC/Code::Blocks), set up IDE, compile and run the first "Hello, World!" program.                                                                                                                                  | 1        |
| 2       | Write a Program to show the use to input (Scanf)/output (Printf) statements and block structure of C-program by highlighting the features of "stdio.h".                                                                                | 2        |
| 3       | Write a program to add two numbers and display the sum.                                                                                                                                                                                | 3        |
| 4       | Write a program to calculate the area and the circumference of a circle by using radius as the input provided by the user.                                                                                                             | 4        |
| 5       | Write a Program to perform addition, subtraction, division and multiplication of two numbers given as input by the user.                                                                                                               | 5-6      |
| 6       | Write a program to evaluate each of the following equations.<br>(i) $V = u + at$ . (ii) $S = ut + \frac{1}{2}at^2$ (iii) $T = 2\sqrt{a + \sqrt{b + 9c}}$ (iv) $H = \sqrt{b^2 + p^2}$                                                   | 7-8      |
| 7       | Write a program to swap two variables:<br>a) By using temporary variable.<br>b) Without using temporary variable                                                                                                                       | 9-10     |
| 8       | Write a Program to find the greatest among three numbers using: <ul style="list-style-type: none"> <li>• Conditional Operator</li> <li>• If-Else statement</li> </ul>                                                                  | 11-12    |
| 9       | Write the following programs using switch case statement: <ul style="list-style-type: none"> <li>• To check that an input alphabet is vowel or consonant</li> <li>• To check whether a number is positive, negative or zero</li> </ul> | 13-14    |
| 10      | Write a program using while loop to print the sum of first n natural numbers.                                                                                                                                                          | 15       |
| 11      | Write a program to check a number is Armstrong or not using For loop.                                                                                                                                                                  | 16-17    |
| 12      | Write the program to count the digits in a number and then print the reverse of the number also.                                                                                                                                       | 18-19    |
| 13      | Write a program to generate the Fibonacci series.                                                                                                                                                                                      | 20       |
| 14      | Write a program to print the following patterns:<br>a)<br>*<br>* *<br>* * *<br>* * * *<br>* * * * *<br>* * * * * *                                                                                                                     | 21-22    |

|    |                                                                                                                                                                                                      |       |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
|    | b) <pre>       *      * *     * * *    * * * *   * * * * *  * * * * * * * * * * </pre>                                                                                                               |       |
| 15 | Write the program to print the following pattern:<br><pre> 1 2 3 4 5 6 2 4 6 8 10 12 3 6 9 12 15 18 4 8 12 16 20 24 5 10 15 20 25 30 6 12 18 24 30 36 </pre>                                         | 23-24 |
| 16 | Write a program to check that the given number is prime, Armstrong or perfect using the concept of functions.                                                                                        | 25-26 |
| 17 | Write a program to calculate the area and circumference of a circle using functions.                                                                                                                 | 27    |
| 18 | Write a program to swap two variables using the concept of call by value and call by reference.                                                                                                      | 28-29 |
| 19 | Write a program to perform the following operations on 1D-Array: <ul style="list-style-type: none"> <li>• Insert</li> <li>• Update</li> <li>• Delete</li> <li>• Display</li> <li>• Search</li> </ul> | 30-32 |
| 20 | Write a program to calculate the sum of array elements by passing it to a function.                                                                                                                  | 33    |
| 21 | Write a program to show the use of passing pointer as arguments to the functions.                                                                                                                    | 34    |
| 22 | Write a program matrix multiplication using the concept of 2D array                                                                                                                                  | 35-36 |
| 23 | Write a program to transpose a given matrix.                                                                                                                                                         | 37-38 |
| 24 | Write a program to find the factorial of a number by using the concept of recursion.                                                                                                                 | 39    |
| 25 | Write a menu driven C program to show the use of in-built string functions like strlen, strcat, strcpy, strcmp, strrev etc.                                                                          | 40-42 |
| 26 | Write a Program in C to display the total number of appearances of a substring provided as input by the user in a given string.                                                                      | 43-44 |

|    |                                                                                                                                         |       |
|----|-----------------------------------------------------------------------------------------------------------------------------------------|-------|
| 27 | Write a program to display the sum of the digits of a number by using the concept of recursion.                                         | 45    |
| 28 | Write a C program to add two distances in inch & feet using the concept of structures.                                                  | 46-47 |
| 29 | Write a C program to add two complex numbers using the concept of structures in C.                                                      | 48-49 |
| 30 | Write a program in C to store the information of five employees using both concepts i.e. array of structure and array within structure. | 50-52 |
| 31 | Write a Program in C to find and replace a specific string in a file and also display the total number of appearances of that string.   | 53-54 |
